

Update 2

Throughout these weeks we have finished the drawing on the computer. We've been busy on fitting the cross bars. Alex has been busy welding while Matt has been on the mill making the cross bars fit. Matt has showed Alexi how to work the mill for extra help. We've also finished painting the engine. Vladimir and Kong have reassembled the engine with the newly painted parts. Some problems have occurred on the cross bars fitting onto the body. The cross bars were too wide apart because we had bent it too much. We had to cut off the cross bars that Alex welded, and then Kong had to grind the welding bead off the roll-bar. We made new cross bars and measured correctly so that the cross bars would fit onto the body. We are currently almost done with the cross bars.

Chassis

Alex welding

Alexi working on update

Bending cross bars

Matt on the mill mitering tubes

Vladimir reassembling the engine

Kong getting the roll-bar ready for a the cross bar attempt #2
