

# Update 3

In these two weeks Vladimir had gone to NWTC to use the water jet to cut the floor panel for our chassis. We are currently done with the top part of the chassis. Right now we are currently working on the back of the chassis. Kong has been in charge of completing the purchase orders for our parts. Matt has finished with the cross bars on the front end of the chassis. Alexi has also helped Matt on the cross bars. Alex and Kevin had been working on the computer to design the back part of the chassis. We currently still need to have the back part of the chassis finished so that the engine can be placed.
