

Update 4

We are almost finished with the chassis. Matt and Kong are trying to make the engine mount fit onto the chassis. The engine mount's measurements were off a little bit, so Matt and Kong had to recreate the bars and weld it back on. Alex has been finish welding all the bracing. Alex and Kevin have gone to NWTC to work on the water jet. They were able to get the rear axle plates cut. Vladimir is in the process of learning how to weld. Alexi and Vladimir have told Mr. Meyer about the materials needed for the front rear axle and now are waiting for the material to come in. This week was shorter so we will not be having school on the 29th of Thursday and the 30th of Friday.

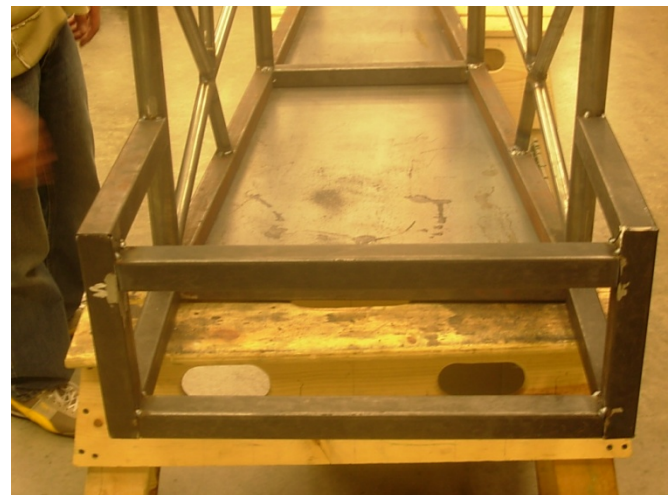

Chassis

Matt welding the engine mount

Vladimir finishing some of the welds
