

# Team CLC

October 4- 15, 2010  
Update 3

## Overall

Our team has made great progress this week. More and More team members are learning how to weld, and the numbers of unnecessary mistakes are getting smaller. Team morale is high, and we are corroborating much better between the 2 hours.

## Chassis

At the end of the week, all of the bars have been welded to the chassis. We will begin work on the backend design and construction soon.

Many of the bars are now welded to the chassis and it is almost complete.

## Floor

The floor was cut using the shear at NWTC by Alex and Sean

## Trouble Shooting

- Problems our team has conquered this week are how we are planning to cut out the flooring for the car, and what design the floor is going to be.
  - Bending the halo bar so it fits correctly on the chassis.
  - We have trained or started training more of our team to be able to weld to help the assembling process.

Sean continuing to weld bars to the chassis
