

Team Fatheadz

- Due to the hard work of the team these past few weeks, the car is coming along quite nicely.
- The rear end housing for the motor is now complete.
- The gas tank is also mounted into place .
- We also cut and bent the firewall to fit into place.

Current Objectives

- Currently the team is working on getting our front end chassis complete.
 - Right now we are attaching brackets/tie rod ends to our rack and pinion so we can have functional steering.
 - We are also working with the rear end chassis so we can get it sent to welding and finished.
 - Soon we will be getting the sprocket and the chain along with the clutch so we can put it all together.

Future Plans...

fatheadz

- ▶ **Mount brake booster along with brake lines so we can then test our braking system.**
- ▶ **We also plan on taking our body to Frame Works Marketing Group, who is going to wrap and decal our body for us.**
- ▶ **Also, we are planning on painting the chassis and mounting the rear axle with the hub.**
- ▶ **Hopefully soon we get a rolling chassis!**
