### Team Update #4

**Status Report:** Our car is coming along quite nicely. At this point we have the gas and brake pedals created and are mounted in the car. We have also finished out kill switch plate and have a mount for the starter button. Zak was able to get a racing seat from his uncle that we have been able to modify to make it easier to get in and out of the car.

**Current Objective(s):** We are currently working on finishing a mount for the seat that is removable to we can easily take the seat out. Another project we are working on is the steering mount. We have created a bracket for the steering rack to sit in. We are still working on how it will be mounted to the car. We have also created a bracket for the master cylinder and are working on getting that mounted in our car too. Last we have been working on a mount for the brake fluid container which is almost ready to be mounted.

**Thoughts so Far:** We had a few setbacks but we got passed them and we are almost done with many parts for our car. By the next team update we should have most of our current objectives completed. We are still waiting on word on the rear differentials so we haven't been able to start our rear axle of the car but we are hopeful that we will get word on them soon. We would also like to thank Zak's uncle for donating us our new seat.

#### **What's for the Future?**

1. Mounting the master cylinder
2. Mounting the brake fluid container
3. Finish mounting the seat
4. Make a firewall
5. Get working on the rear assembly
